1 Overview

The Imaging Core Lab is Invicro based in New Haven, Connecticut, USA. In conjunction with the study sponsor, Invicro will provide the imaging center with any technical support necessary to ensure optimal imaging is achieved. Invicro will be responsible for imaging center evaluation, qualification, and training as well as, receipt, quality control (QC), query, and data management of single-photon emission computerized tomography (SPECT) imaging data.

Participating clinical site imaging centers will acquire images according to the trial-specific process standards detailed within this manual. Imaging centers will submit images and corresponding data (image data) to Invicro using iPACS, as the preferred method. iPACS enables the secure, controlled, and efficient submission of image data, in addition, to serving as the portal for query resolution. Before data from participants may be acquired, Invicro will train each imaging center on the image acquisition requirements, and the image data submission and query resolution processes.

1.1 Purpose of the Technical Operations Manual

Invicro has published this Technical Operations Manual (TOM) to instruct imaging centers in the following areas:

- Imaging center set-up procedures
- Image acquisition guidance (required image acquisition schedule, tracer, administration, and recommended techniques)
- Archiving of images and corresponding data
- Submission of image data to Invicro
- Query receipt and resolution process

Note: For more information about the clinical trial, please request a copy of the current clinical trial protocol from your respective clinical trial site team.

1.2 Trial Design

1.2.1 PPMI Clinical (main) study

The PPMI Clinical study (protocol 002) is a longitudinal, observational, multi-center study to assess progression of clinical features, digital outcomes, and imaging, biologic and genetic markers of Parkinson's Disease (PD) progression. The study population will include participants with manifest PD, prodromal PD, and healthy controls. The study is designed to identify markers of disease progression of PD for use in therapeutic development.

The PPMI Clinical study will include up to 4,500 participants at up to 50-55 international clinical sites. Participants will be in one of the following cohorts:

- Current PPMI 001 participants will be divided into the following cohorts:
 - Healthy Control
 - PD
 - Prodromal
- Newly enrolled PPMI Clinical participants will be divided into the following cohorts:
 - Healthy Control
 - PD
 - Prodromal

During the PPMI Clinical main study (002), participants will receive up to 6 brain SPECT scans, depending on the cohort designation. Brain SPECT scans will be used to evaluate eligibility for newly enrolled participants in the PPMI Clinical study and in the evaluation of imaging biomarkers for disease progression.

1.2.2 Sub-study (004)

The sub- study (protocol 004) is a longitudinal, multi-center study to assess progression of brain SPECT and [¹⁸F] AV-133 imaging in PD participants for up to 24 months. Approximately 50 PD and 100 prodromal PD participants from the main study will be recruited from up to 15 clinical sites. All participants will be comprehensively assessed at baseline and every 6-12 months thereafter.

For the sub-study (004), participants will have up to 3 brain SPECT scans. Brain SPECT scans will be used to evaluate the predictive value of Early Imaging.

Please Note: The algorithm used for eligibility determination is dependent on cohort designation, therefore it is imperative to correctly note a prospective participant's cohort when imaging is acquired, and imaging data are submitted.

1.3 General Requirements

1.3.1 Imaging Center Compliance

- **Responsibilities:** Each imaging center is responsible for the following activities.
 - Always ensure consistent scan parameters and that the approved scanner is used for all participant assessments. Ideally, the same scanner is used for all assessments within and across all participants.
 - Acquire images according to the trial-specific process standards within and according to the protocol's Schedule of Assessments. Image acquisition and documentation should not deviate from the clinical trial protocol but may be different from your regular clinical 123-I Ioflupane SPECT imaging protocol. Please follow the procedures described in the TOM exactly. **All SPECT scans must be submitted to Invicro within 24 hours.**

- Respond promptly to queries generated by Invicro within 24 hours for Screening scans, and 5 days for all other time points.
- Confirm that all technologists or other personnel who will be performing scans for this protocol are properly trained on the study-specific acquisition and reconstruction parameters, as well as, data submission and query handling procedures.
- **Regulatory compliance:** All site personnel must comply with the International Council for Harmonization E6(R2) guidelines on Good Clinical Practice (GCP) when documenting acquisition, archiving images, and submitting image data to Invicro.
- **Confidentiality:** Follow regional privacy practices to de-identify (ie, redact) all participant information (name, medical record number, etc) before submitting image data to Invicro. Image data submitted to Invicro via the iPACS system will automatically undergo de-identification.

1.3.2 Schedule of Assessments

Your imaging center may scan the first participant following completion of all training and approval requirements and confirmation of site activation from the Site Management Core. After the scans from the first participant are approved, scanning for the remainder of the participants may begin according to the protocol Schedule of Assessments as summarized in [Table 1](#) and [Table 2](#).

Table 1: Schedule of SPECT Assessments for Clinical (main) Study (Protocol 002)

Scan	Healthy Control ^{a,b}	PD ^{a,b}	Prodromal ^{a,b}
Screening Scan ^{c,d}	X	X	X
Visit 04 (12 months) ^e	-	X	X
Visit 06 (24 months) ^e	-	X	X
Visit 10 (48 months) ^e	-	X	X
Withdrawal Visit ^f	-	X	X
New Clinical Diagnosis Visit ^g	-	X	X

^a Cohorts include participants newly enrolled in PPMI Clinical and participants transitioning from PPMI 001. Newly enrolled participants in PPMI Clinical will start with the Screening Visit. Participants transitioning from PPMI 001 to PPMI Clinical will not have a screening brain SPECT scan, and these participants will start at the equivalent visit in PPMI Clinical from the PPMI 001 schedule.

^b Participants may not have the following drugs within 6 months of the Screening Visit: dopamine receptor blockers (neuroleptics), metoclopramide and reserpine.

^c A previously-acquired screening brain SPECT image may be used if the scan was acquired within 6 months of the study scheduled brain SPECT Screening visit, and meets criteria of the Imaging Core Lab to accept the scan for use.

^d Brain SPECT screening imaging appointments will occur within 60 days prior to Day 1.

^e Brain SPECT imaging will occur within ± 45 days either side of the Target Visit Date.

^f If a participant withdraws from the study and agrees to attend one more visit, follow the Clinical protocol Event Drive Modification of Scheduled Visits for withdrawal from study. The annual visits are nested within the "Other SPECT Timepoint" selection option when submitting the data to Invicro in iPACS.

^g Follow the Clinical protocol Event Driven Modification of Scheduled Visits to determine if imaging should be completed. Annual visits are nested within the "Other SPECT Timepoint" selection options when submitting the data to Invicro in iPACS.

Table 2: Schedule of SPECT Assessments for Sub-Study (Protocol 004)

Scan	Early PD participants
Visit 02 (6 months)	X

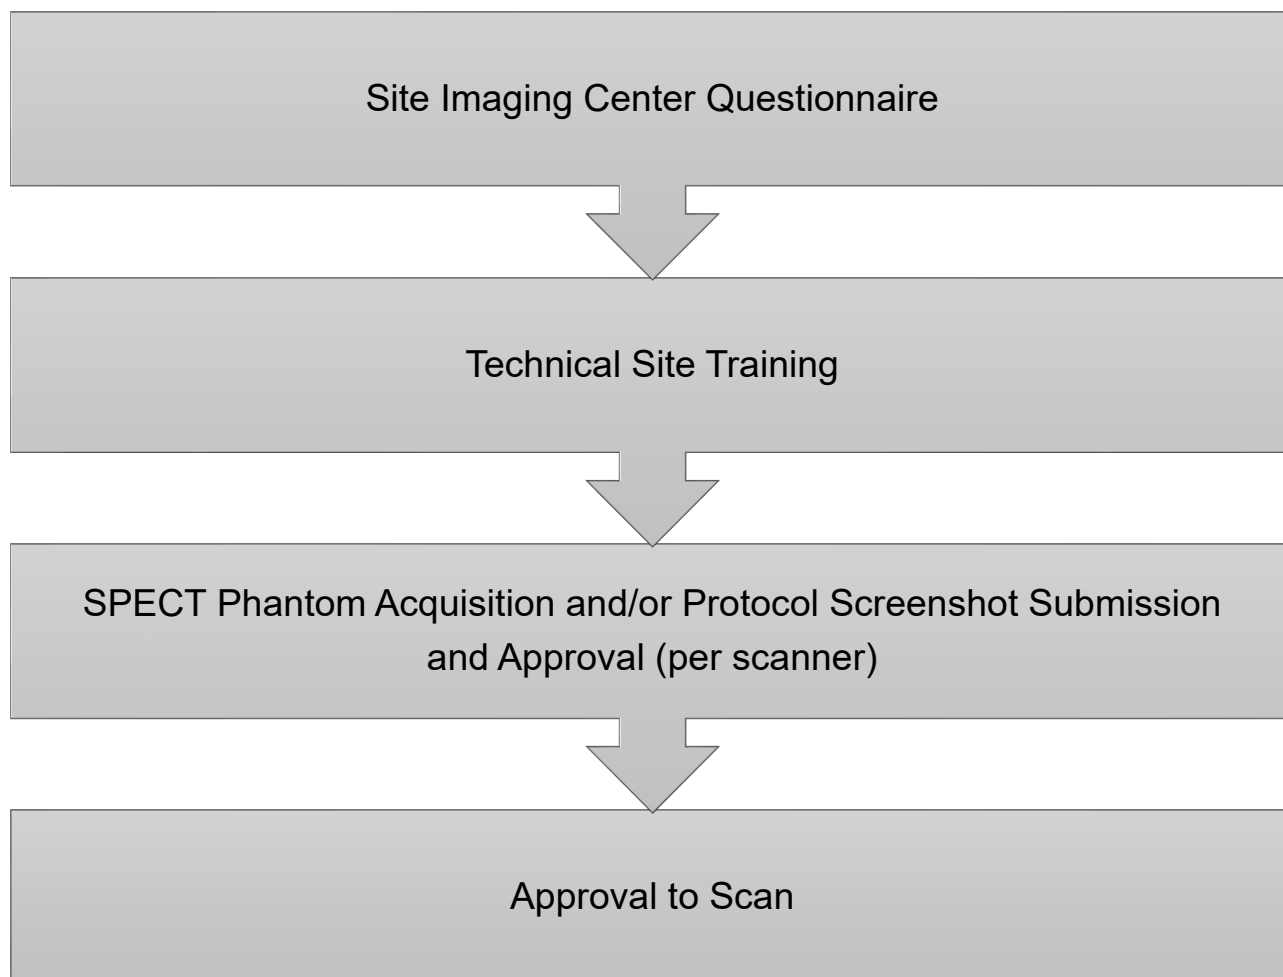

1.3.3 SPECT Image Data Submission Timelines

- The screening brain SPECT scan report will be used by the clinical imaging center to assess new enrolled participant's eligibility for entry into the study. **It is therefore paramount that the brain SPECT data and corresponding imaging forms are transferred to Invicro within 24 hours of image acquisition.**
- Notification of applicable visual assessments and quantitative analyses data for eligibility will be provided to IND within 3-5 business days of receipt of the image data (with all queries addressed). IND will confirm whether a participant meets the SPECT eligibility (ie, eligible or not eligible) to the site.
- Subsequent brain SPECT scans and corresponding imaging documents must be submitted to Invicro within 24 hours of image acquisition.

2 Imaging Center Set-up

Participating imaging centers will be required to complete Invicro's set-up procedures prior to conducting study participant imaging. The purpose of these procedures is to ensure each imaging center participating in the study meets the high level of standard required by Invicro and the study sponsor, provide technologists and supporting staff with training on study imaging requirements, assess the performance of the imaging equipment to be used for the study, and ensure the protocols to be followed for participant imaging are properly established. These measures help assure the robustness and poolability of quantitative brain SPECT imaging across imaging sites and cameras.

The following procedures are included as part of set-up:

2.1 Technical Assessment Questionnaire

The initial step in the set-up process is the center's completion of a technical assessment questionnaire. This form provides Invicro with contact information for key individuals, address information, specific scanner and computer system capabilities, and other specifications necessary for satisfactory completion of the study. Invicro will provide a brief overview of the set-up process to the site and imaging center at the time of sending the questionnaire.

The completed questionnaire is reviewed by Invicro for initial assessment of the imaging center's technical capabilities. If the center meets the technical standards required to perform as a participating center, Invicro will contact the center informing them of the next steps necessary for completion of the qualification process for the study described in the following paragraphs.

In certain cases where Invicro has recently worked with or is currently working with an imaging center on another study and has already collected a questionnaire, the requirement for the center to complete a new questionnaire may be waived.

2.2 Technical Site Training

2.2.1 Physical (On-site) Technical Site Set-up

In instances where an imaging center has not worked with Invicro on a recent or concurrent trial, a physical (on-site) visit may be required. For such instances, a representative of Invicro will visit the SPECT imaging center to conduct the technical site training. This visit is typically performed in 2 sessions over one day.

The initial session entails a meeting among the imaging center staff, the clinical site personnel, and an Invicro set-up specialist. During this meeting the overall objectives and rationale for the imaging component of the clinical trial are reviewed. Individual responsibilities for obtaining the imaging measures and a walk-through of the communication flow, logistics, and potential problems (eg scanner availability, etc.) at the site are discussed and questions addressed.

The second part of the Physical Technical Site Set-Up Visit involves the Invicro set-up specialist and the nuclear medicine team or technologist. The session begins with a review of the normal clinical operations relating to scanner access, patient flow, and standard Quality Assurance (QA)/QC practices for the SPECT system. An acquisition protocol for use in the study is established on the SPECT scanner's acquisition computer, and an Invicro supplied phantom is acquired using the study-specific acquisition parameters.

2.2.2 Remote Technical Site Set-up

Technical site training may alternatively occur through remotely performed procedures.

Training for remote site setups will occur through a web-based learning module. Invicro will distribute user specific accounts to relevant clinical and imaging staff, providing access to the training portal. The web-based training portal provides users with study reference material, and a study-specific slide presentation covering overall study objectives, imaging timepoints and requirements, modality specific parameters, tips to avoid queries, and a walk-through of the electronic data transfer process.

In addition, imaging centers will be required to build the study-specific protocol in their SPECT scanner and submit screenshots of the relevant acquisition and reconstruction parameters to Invicro for review and approval.

Please note, at least one primary staff member (technologist, physicist, or physician) responsible for the conduct of study imaging must be trained by Invicro. It is the responsibility of the imaging center to ensure all additional personnel are trained peer-to-peer by the primary staff member initially trained by Invicro and are supplied with a copy of this imaging manual, as well as all other study materials. All additional training activities must be documented, with a copy of this training documentation provided to the referring clinical site(s). Please contact Invicro for assistance with additional training or questions.

2.3 Approval to Scan

Following completion of the technical set-up procedures, an 'Approval to Scan' notification and a detailed technical site set-up report summarizing the dose, acquisition and reconstruction parameters, image archival, and the approved method of image transfer will be sent to the imaging center, with a copy to the clinical site and sponsor designees. The approval notification and technical report should be archived.

Please Note: This 'Approval to Scan' notification indicates that the imaging center is now ready to scan their first study participant.

3 Technical Binder

The imaging center will receive a link to an electronic technical binder containing all essential imaging study documents including, but not limited to, a copy of this TOM, the training presentation, radiopharmaceutical information, and key Invicro contact information. These documents are to be printed and made available to any staff which will need access to this information. Additionally, Invicro recommends each imaging center file all study documents that have been submitted, and all study related communications (eg, emails or faxes).

Please Note: Study related documents may be updated throughout the trial and will be distributed to your imaging center.

4 Scan Identification (Naming Convention)

It is very important that the imaging center uses a standard file naming convention so that all scans can be easily identified by Invicro. The participant naming convention will be provided by the clinical site personnel when scheduling the SPECT visit.

In this study, participants will be assigned a Site Number and a unique Subject ID number that must be included on the submission form. The Site Numbers in this study are comprised of 3 digits. Participants transitioning from PPMI 001 to PPMI Clinical will maintain the previously assigned 4 or 5-digit Subject ID. Participants newly enrolled in PPMI Clinical will be assigned a 6-digit Subject ID.

Please note: the 4, 5 or 6-digit Subject ID number should be populated in both the Participant Name and ID fields with the Date of Birth populated with 01-Jan-1970 when setting up an acquisition on the scanner or during the de-identification of the scan file.

5 Radiotracer Information

For this study, brain SPECT imaging is used to determine participant eligibility and to provide assay of striatal dopamine transporter binding to assist in the evaluation of adult participants with suspected Parkinsonian syndromes (PS).

^{123}I -DaTscan™ will be used as the radiotracer for brain SPECT imaging. Select sites may be approved for use of $^{99\text{m}}\text{Tc}$ -TRODAT-1 due to availability of ^{123}I -DaTscan™.

Important Reminders for all sites:

- ^{123}I -DaTscan™ and $^{99\text{m}}\text{Tc}$ -TRODAT-1 are radioactive drugs and should be handled with appropriate safety measures to minimize radiation exposure during administration. Radiopharmaceuticals should be received, used and administered only by authorized persons in designated clinical settings, and handled with strict adherence to local regulations.
- The responsible physician or designee at the SPECT imaging center will confirm the participant's suitability for undergoing the SPECT imaging study.
- For women of childbearing potential (including those who have had a tubal ligation), a urine or blood pregnancy test will be conducted within 24 hours before the SPECT scan. The result must be negative for the participant to receive the radiotracer.
- Obtain and record participant's weight at each visit.
- Fasting is not required for SPECT scans in this study.

Follow your facility's standard processes for documentation of information regarding the participant and scan procedure. Information requested by Invicro during the submission process will include, but is not limited to, participant weight, dose activity assays, times of assays, date and time of injection and date and time of scan. An example of the electronic data submission form with requested information is provided in the appendices of this document.

5.1 Radiotracer Dose Ordering

5.1.1 ^{123}I -DaTscan™

To order a DaTscan™ dose, the study-specific prefilled Dose Order form supplied by the Invicro Supply team via email must be completed and emailed or faxed to GE Healthcare via the email address or number indicated on the Dose Order form. A confirmation email will be sent from GE Healthcare once the Dose Order is processed.

Also noted on the Dose Order forms are the days of availability and lead times for dose orders and cancellations. The Imaging center staff should be aware of days of availability and approximate time of dose delivery to facilitate scheduling with the clinical staff.

The DaTscan™ vendor will be responsible for ensuring the imaging centers have their RAM license and/or other applicable licenses to allow the center to accept DaTscan™.

5.1.2 ^{99m}Tc-TRODAT-1

Follow your standard site-specific procedures for ordering ^{99m}Tc-TRODAT-1.

5.2 Dose Preparation

5.2.1 ¹²³I-DaTscan™

The ¹²³I- DaTscan™ dose may be provided to the imaging center in either a unit dose syringe or a single or multi-dose vial. It is the responsibility of the imaging center to ensure that they have the necessary equipment for radiopharmaceutical injection (including syringe shields and in some cases the equipment necessary to draw doses from vials).

5.2.2 ^{99m}Tc-TRODAT-1

Follow your standard site-specific procedures for ^{99m}Tc-TRODAT-1 dose preparation.

5.3 Dose Administration

5.3.1 ¹²³I-DaTscan™

Participants should be pretreated with a thyroid blocking agent (eg, saturated solution of potassium iodide (SSKI)) prior to the administration of the radiotracer. Participants who are allergic or sensitive to iodine will be administered potassium perchlorate (400 mg) rather than the potassium iodide solution.

The required DaTscan™ dose for this study protocol is 3-5 mCi (111-185 MBq), administered as a slow intravenous injection (over approximately 20 seconds) through an indwelling catheter followed by an infusion line flush of 15-20 mL of normal saline. Do not exceed a dose of 5 mCi (185 MBq) and do not use when the activity is below 3 mCi (111 MBq).

For accurate determination of the amount of activity injected, the syringe is assayed prior to and immediately following injection with the assay amounts and times recorded in the appropriate fields when uploading through the web submission portal.

5.3.2 ^{99m}Tc-TRODAT-1

The required ^{99m}Tc-TRODAT-1 dose for this study protocol is 25 mCi, administered as a slow intravenous injection (over approximately 20 seconds) through an indwelling catheter followed by an infusion line flush of 15-20 mL of normal saline.

For accurate determination of the amount of tracer injected, the syringe is assayed prior to and immediately following injection with the assay amounts and times recorded in the appropriate fields when uploading through the web submission portal.

6 SPECT Imaging Overview & Procedures

6.1 Imaging Protocol

Images will be acquired using a gamma camera that is capable of performing SPECT imaging. The required start time for imaging to commence is 4 hours (± 30 minutes) post radiotracer injection. Invicro will determine and approve the parameters to be used for this study as part of the set-up procedures prior to participant imaging.

Participant positioning:

- The participant should be informed about the total acquisition time and positioned for maximum comfort.
- The participant's head should be placed in the appropriate head holder and the field of view (FOV) should encompass the entire head to include the brain from most superior cortical regions through the inferior portion of the cerebellum. Since routine viewing software allows correction of minor obliquities of head orientation, the participant's comfort (which reduces the probability of motion during acquisition) is more important than perfect alignment of the head.
- The participant should be told of the necessity to avoid (voluntary) movements of the head and asked for her/his active cooperation and be immobilized per standard procedures for brain imaging.
- In order to optimize image quality, detector heads should be as close as possible to the participant with a target radius of 15 cm. Record the actual radius utilized for imaging.

Acquisition protocol:

As a general protocol, raw projection data, will be acquired into a 128x128 matrix with low-energy high resolution (LEHR) parallel hole collimators using a circular step and shoot mode with each step moving 3 degrees for a total of 60 projections per detector (180 degrees rotation per detector) for dual head systems, 30 seconds per projection, with a 20 % energy window centered on 159 keV (± 10 %) for ^{123}I -DaTscan™ and a 20 % energy window centered on 140 keV (± 10 %) for $^{99\text{m}}\text{Tc}$ -TRODAT-1, and an acquisition zoom of 1.23. Attenuation correction using low dose CT may be utilized when available and will be performed in accordance with local standard procedures.

Scanning procedure:

- Approximately 3.5 hours post injection, have the participant void, and position the participant in the scanner
- Ensure the entire brain is within the FOV and that the participant is immobilized and comfortable
- If applicable, perform the CT for attenuation correction matching the SPECT coverage, before

or after the emission acquisition, as per institutional guidelines

- Begin SPECT scans 4 hours post injection (targeting \pm 30 minutes)
- Begin 99mTc-TRODAT-1 scans 3.5 hours post injection (targeting \pm 30 minutes)
- Scan the participant using the acquisition protocol reviewed and approved by Invicro
- The following image data will be submitted to Invicro: SPECT projection, reconstructed and CT (if applicable) image data

6.2 Reconstruction Protocol

The imaging center will reconstruct the SPECT images using their standard clinical brain SPECT scan reconstruction. The Imaging Core Lab will also reconstruct the images using a standard iterative reconstruction algorithm and then correct them for attenuation.

7 Participant Safety and Adverse Events

Each participant needs to be monitored for adverse events (AEs) while they are at the imaging center, as well as by phone 2 to 3 business days following the scan. An AE is defined as any unfavorable and unintended sign including an abnormal laboratory finding, symptom or disease associated with the use of a medical treatment or procedure, regardless of whether it is considered related to the medical treatment or procedure, that occurs during the course of the study.

The clinical site principal investigator (PI) is responsible for reporting AEs according to the AE reporting procedures described in the study protocol. Although not anticipated to happen frequently, AEs may occur during the participant's visit to the imaging center, and therefore, it is very important for the imaging centers to contact their respective clinical study site personnel immediately (ie, PI or study coordinator) if they become aware of any AEs during the imaging procedures. The clinical study coordinator should be contacted by phone and the time of that call documented along with specific information related to the adverse event.

Please Remember: Archive the original document completed for the adverse event in the Technical Binder and send a copy to the clinical coordinator.

8 Image Data Archiving and Submission

8.1 Data Submission Checklist

All imaging metadata and data files should be sent through iPACS. Modality specific electronic submission forms are required to be completed within iPACS for each data submission. Please reference Section 1.3.2 of this document, and the clinical protocol for details on the Schedule of Assessments.

Steps for image data submission:

- Uploaded Image Files (SPECT Projection, reconstructed and CT (if applicable) image data).
- Completed information contained in the iPACS submission form.
- Prior to submission, scans should be assessed for completeness, artifact and/or participant motion and any relevant information documented accordingly in the iPACS submission form.

Please Note: Correct reporting of the Subject ID and Cohort Designation in the submission form are critical for participant eligibility processing.

8.2 Previously-Acquired Scan Submission

Previously-acquired brain SPECT imaging for screening for Protocol 002 may be used if the scan was acquired within 6 months of the study scheduled brain SPECT Screening visit and meets protocol acquisition standards.

A previously-acquired brain SPECT scan that has already been submitted to Invicro for another study, that meets the requirements for inclusion, will not need to be re-submitted through the iPACS portal. However, sites will need to complete a *PPMI Request for Previously-Acquired DaTscan* form for the brain SPECT imaging and provide it to the IND Site Management Core (SMC). This information will then be provided to Invicro.

A previously-acquired brain SPECT scan that is not already in Invicro's database will need to be submitted through the iPACS portal and labeled as "Previously-Acquired / Screening" on the iPACS submission form.

A brain SPECT scan that is acquired for two studies, and is not currently in the Invicro database, that meet the requirements for inclusion (including participant consent for both studies), will be submitted to the PPMI Clinical database through the iPACS portal and labeled as "Screening" on the iPACS submission form. Sites will also need to provide the other study's Subject ID and Site Number. This information can be provided to Invicro Project Management through email.

8.3 Image Data Submission

Imaging data will be transferred to Invicro using the iPACS web submission portal. Invicro's portal uses an electronic transmittal form to capture all relevant scan information, and programmatically de-identifies images in DICOM format during upload. Invicro will provide each user at the imaging site with a unique username and password to access Invicro's iPACS web-based upload tool. In the event there are questions regarding the submission you may be contacted by a member of the Invicro team.

Follow the steps outlined below to perform an iPACS data submission:

1 Access the submission portal using the web address provided below:

<https://corelab-submission.ipacs.invicro.com/>

2 Log in: a unique username and password is provided to personnel responsible for data submission.

The image shows the login interface for the iPACS submission portal. At the top, there is a logo for 'iPACS sub' and the text 'Please sign in to continue.' Below this, there are two input fields: 'Username' and 'Password'. The 'Password' field has a small lock icon on the right. Below the input fields is a blue 'Sign in' button. At the bottom, there are two links: 'DropZone' and 'Need Help?'.

3 Upon successful login, you will be directed to the Submission Dashboard. Click **Add Submission** to create a new submission.

The image shows the 'iPACS Submission' dashboard. At the top, there is a navigation bar with 'iPACS Submission', 'Submissions', and 'Help'. Below this, there is a section titled 'Submission Tasks'. On the left, there is a sidebar with a list of tasks: 'Add Submission' (with a plus icon), 'Conversation' (with a red vertical bar and a circle containing '0'), 'Query Tasks' (with a circle containing '6'), and 'Submission Tasks' (with a circle containing '8'). On the right, there are two dropdown menus labeled 'Patient Name' and 'Patient ID'.

4 Click on Site/Protocol to create a Submission dropdown listing and select the appropriate study/clinical site to submit under.

The image shows a dropdown menu from the 'Submission Dashboard'. The dropdown is titled 'Submission Dashboard'. It contains a green bar with the text 'Project_IS234 - Test Site' and a button labeled 'Press enter to select'. Below the green bar, there is a text input field with the placeholder text 'Select Site/Protocol to create a Submission'.

5 The submission form will display a set of study and modality specific parameter fields to be completed. The file upload section is displayed on the right-hand side of the submission page for uploading of image data and other required documentation.

The screenshot displays the 'Submission Form (ITF)' on the left and the file upload section on the right. The form includes fields for 'Scanner Information' (Name (model) of scanner used, Scanner123), 'Patient YOB (YYYY) *' (1985), 'Scan Information' (Date of PET Scan *), 'Radiopharmaceutical' (Nothing selected), 'Comments' (test comment), 'Signature', 'Username' (SM_Submitter), and 'Password *'. A 'Submit' button and a 'Save Task' button are at the bottom. The file upload section on the right shows 'Upload Queue', 'Uploaded DICOM', and 'Contents' tabs. A message states 'No files have been uploaded. Click or drag files to add files to this submission.' A 'Browse Files' button is highlighted with a red arrow.

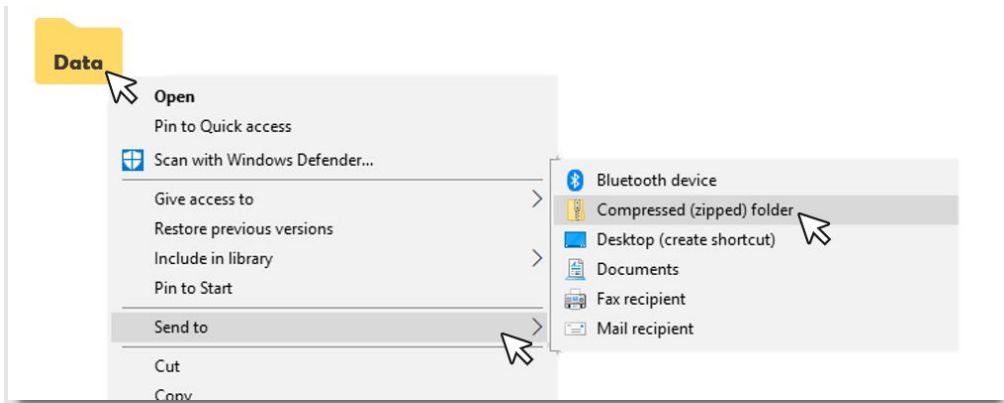

6 Fill in the submission form with the requested study-specific and modality information. Use the free text *Comments* field to provide any explanatory notes related to the data submission and acquisition procedures.

Please Note: It is very important that the correct cohort designation and visit number for each scan are entered in the submission form, as this determines the processing pipeline used for the scan. Participants enrolled in PPMI 001 will start at the equivalent visit in PPMI Clinical.

- **For the Clinical (Main) Study, current PPMI 001 participants will be divided into the following:**
 - **Healthy Control**
 - **PD**
 - **Prodromal**
- **For the Clinical (Main) Study, newly enrolled PPMI Clinical participants will be divided into the following:**
 - **Healthy Control**
 - **PD**
 - **Prodromal**
- **For the Sub-Study (Protocol 004), newly enrolled PPMI Early Imaging participants will be divided into the following:**

- *Early PD*
- *Prodromal PD*

7 Prepare your image data folder for uploading into the submission form. Prior to uploading place your files in a compressed (zipped) folder.

8 Drag and drop the compressed zipped folder containing the files or click Select Files to search for and select the files for import.

9 To complete the submission, click on the **Submit** button. You will be prompted to enter your unique user password to complete the submission.

Signature _____

Username _____

SM_Submitter

Password * _____

Submit Save Task

In the event electronic submission is not available for the imaging center, physical shipment information will be provided on an as needed basis.

Upon completion of an iPACS submission, you will receive an auto-generated email notification from the `corelab_support` inbox confirming successful transfer. The email will display a summary of the submission details. Please retain a copy of this email for your records and reference.

If you do not receive an email notification following submission, contact:
corelab_support@invicro.com

For all other technical support related to iPACS and data submission, please, contact:

corelab_support@invicro.com

8.4 iPACS Submission Form Comments Section

A comments section is included in the iPACS submission form. This is a text-entry field where explanatory notes and useful information regarding the imaging procedure can be provided, for eg, justification for alternate imaging or parameter variations. Comments provided are reviewed during QC of the data and in some cases prevent the need for a query to be issued.

8.5 Scanner QC & Maintenance Documentation

A scanner QC section is contained within the iPACS submission form. Utilize the provided fields to document recent routine preventative maintenance, software upgrades or repairs and QC checks performed.

Invicro should be notified in advance or immediately after any scanner events which may affect the performance of your SPECT scanner such as hardware/software upgrades, un-scheduled maintenance or repairs. In such circumstances, notify the Invicro study contacts provided in this TOM.

8.6 QC and Query Resolution Process

Image data received at Invicro will undergo a rigorous quality inspection. QC checks will include the following, but not limited to:

- De-identification of all participants protected health information
- Accurate completion of the iPACS Submission form
- Completeness of image files
- Adherence to the imaging protocol and parameters approved by Invicro

Invicro will generate a query within iPACS should any question arise regarding the data submission.

Respond to the queries promptly within 24 hours of receipt.

Depending upon the nature of the issue, the resolution of a query may involve simple provision of additional information, resending of one or more image data files, or other action to ensure the completeness of the image data files.

To resolve any issues that arise, Invicro will employ the query resolution process outlined below:

1 You will receive an iPACS generated email notifying you a query has been issued on one of your data submissions. The email will include a link to the portal for resolution of the query.

2 Log into the iPACS portal and navigate to the Submissions page. Queries will be listed in the Queries tab of the submission page.

The image shows the login page for the iPACS sub portal. At the top, there is a logo for 'iPACS sub' and the text 'Please sign in to continue.' Below this, there are two input fields: 'Username' and 'Password'. A blue 'Sign in' button is positioned below the password field. At the bottom of the login area, there are two links: 'DropZone' and 'Need Help?'.

3 Select the query to be addressed and you will be brought to the **Respond to Query** page. The **Query Details** tab will show all queried categories and a description of the issue.

The image shows the 'Respond to Query' page in the iPACS sub portal. The page has three tabs: 'Query Details', 'Queried Dicom Data', and 'Queried Submission Form'. The 'Query Details' tab is active. Below the tabs, there is a section titled 'Previous Task: Enter Query Info'. This section contains a 'Query Category' dropdown menu with options: 'Missing Data', 'Wrong Data' (selected), 'Incorrect Metadata', 'Incorrect Subject', and 'Identifying Information Found'. Below the dropdown is a 'Description' text area containing the text 'Wrong Data'. Below this section, there is a section titled 'Current Task: Acknowledge Query'. This section contains a 'What would you like to do next?' dropdown menu with the option '<Nothing selected>'. At the bottom of the page, there are three buttons: 'Submit', 'Save Task', and 'Cancel'.

4 Navigate to the bottom section with the heading, **Current Task: Acknowledge Query**. Under the **What would you like to do next?** section, choose **Edit Submission** to respond to the query from the drop-down list and then click **Submit**.

This action will bring you back to the **Submission Tasks** page. Click on **Submission Tasks**. Click on the queried submission and fill out the queried fields. You will once again be asked to authenticate the entry with your login password. Click on submit to re-submit the study to Invicro.

5 Example of common query types and guidance to prevent/resolve queries:

Query type	Guidance to prevent/resolve queries
Time Point Verification	Ensure the correct visit is selected when submitting the data.
Incorrect Acquisition Protocol Followed	Take measures to minimize deviations to the approved imaging procedures and always utilize the acquisition protocol approved for use by Invicro. Provide explanatory comments within the Comments field.
Missing Series or Slices	Upload the missing data <i>within</i> the query form and provide a comment. Do not create a new submission.

6 To complete the query, you will be requested to enter your iPACS password in the Signature field.

A screenshot of a web form. At the top, there is a label "Signature:" followed by a large, empty text input field. Below the input field, there are two buttons: a blue button labeled "Preview Response" and a grey button labeled "Cancel Response". A mouse cursor is pointing at the bottom of the input field.

7 Invicro will notify sites by email or phone if any outstanding queries are not resolved. Once Invicro has determined that the query has been sufficiently resolved, the query will be closed.

8.7 Archiving Instructions

In compliance with GCP guidelines (or regional requirements, whichever are a higher standard), maintain an archive of all image data in a readable format, using the same format that was submitted to Invicro.

Retain the archived image data for 25 years after completion or discontinuation of the trial or per institutional guidelines, whichever is longer. Only after this period may documents be destroyed per local regulations. Please note, if the imaging center does not have the capability to archive the imaging data, Invicro requires that the data be saved for 30 days at minimum. Please contact Invicro if your center is unable to archive data for 30 days.

9 QC & Calibrations

9.1 Scanner Quality Assurance

QC measures are to be performed according to the center and the camera manufacturer's standard procedures as implemented in the center's QC program for the SPECT camera and dose calibrator.

The SPECT camera should have and maintain up-to-date flood uniformity corrections (intrinsic and extrinsic) and center of rotation (COR) corrections. Invicro recommends that calibrations are to be completed on a schedule based on manufacturer recommendations and requirements. In addition, a daily ^{57}Co flood scan should be done at the beginning of the day the scanning is to be completed. The ^{57}Co flood scan should be visually inspected for abnormalities. If there is a possibility that the abnormality could impact the quality of the SPECT scan the study participant's visit should be rescheduled. Verification that the daily QC scan has been performed should be documented on the iPACS submission form.

Software upgrades, changes in hardware and any other manipulations or changes to the imaging camera should be recorded on the iPACS submission form.

9.2 Dose Calibrator

QC of the dose calibrator should be performed throughout the course of the study. This typically will include daily constancy, quarterly linearity and annual accuracy tests.

9.3 Phantom Data

Invicro may request a phantom scan to be acquired on the SPECT scanner intended for use in the study as part of the initial set-up and qualification procedures or at any time throughout the course of a study. Phantoms may be requested if imaging centers are new to Invicro, an imaging center prefers to use a scanner which Invicro has not previously qualified, or the phantom data previously collected by Invicro does not meet the requirements of the study. Invicro may also request a phantom acquisition be performed should a qualified SPECT scanner undergo significant maintenance during the study, or if scanner performance issues are noticed during QC review of study participant data.

10 SPECT Scanner Replacement or Upgrades

If your center will be replacing or upgrading your SPECT scanner or acquisition software, it is critical that you inform Invicro prior to the replacement or upgrade occurring, so that Invicro can take the necessary steps to ensure the continuity of the imaging outcome measures in this longitudinal research study. Invicro may need to revisit the imaging center to acquire another phantom.

11 Supporting Information

11.1 Invicro Contacts

Note: When contacting Invicro please remember to indicate the following to ensure your inquiry can be addressed appropriately and expeditiously:

- Protocol
- Site number
- Subject number (if applicable)

For all questions related to iPACS image data transfer or technical account issues:

corelab_support@invicro.com

For all technical questions related to SPECT protocol set-up or image QC:

Andrea Perez

Sr. Manager II, Imaging QC & Processing
+1-203-401-4315 voice
aperez@invicro.com

For all other study related questions, including the request for credentials to upload images to iPACS or to check the status of an Independent Review result:

Andrew Serrano

Project Manager II
+1-203-990-1638 voice
+1-203-789-8037
aserrano@invicro.com

If shipping images on CD/DVD, you must use the **Invicro Fed Ex # 2295-4740-2** and **add the study Global ID # 006892 as the Reference** on the shipping bill.

11.2 TOM Amendment History

The table below is intended to summarize changes from the previous approved final TOM. Revisions or amendments to the protocol will not require an amendment to the TOM, unless substantive changes impact imaging methods.

Version	Version Date	Summary of Changes
Final v1.0	29-Apr-2020	Original
Final v2.0	28-Jul-2020	<ul style="list-style-type: none"> Updated to add premature withdrawal visit Section 1.3.2 and Section 12 (Appendix 2) Updated to include Companion Study, Early Imaging 2.0 (Title Page, Section 1) Updated data submission process (Section 6) Editorial changes (global)
Final v3.0	21-Oct-2020	<ul style="list-style-type: none"> Updated to include previously-acquired DaTscan images (Protocol 002, Section 1.3.2) Added Previously-acquired Scan section (Section 8.2) Updated SPECT scan submission form (Protocol 002, Section 12.2) Editorial updates (global)
Final v4.0	27-Jul-2021	<ul style="list-style-type: none"> Updated Table 1 (Section 1.3.2) Updated Previously-Acquired scan details (Section 8.2) Updated SPECT submission form (Section 12.2) Updated based on Protocol 002 Version 1.2 (global) Editorial changes (global)
Final v5.0	07-Dec-2021	<ul style="list-style-type: none"> Added ^{99m}Tc-TRODAT-1 as a SPECT radiotracer (Section 5) Editorial updates (global)
Final v6.0	01-Dec-2022	<ul style="list-style-type: none"> Updated for consistency with 002 protocol Version 2.0 dated 09-Aug-2022 and 004 protocol Version 3.0 dated 12-Oct-2022 Editorial updates (global)

12 Appendices

12.1 Appendix 1: Imaging Parameter Specifications

Example of Typical SPECT Acquisition(s)	
SPECT Imaging Mode:	Step and Shoot
Collimators:	LEHR parallel hole collimators
Energy Window:	¹²³ I-DaTscan™: 20 % energy window centered on 159 keV (+/- 10 %) ^{99m} Tc-TRODAT-1: 20 % energy window centered on 140 keV (+/- 10 %)
Orbit:	Circular
Matrix	128x128
Acquisition Zoom:	1.23
Angular Range:	3 degrees
Seconds:	30 seconds
Number of Projections	60 projections (180 degrees rotation per detector)
Radius:	15 cm

12.2 Appendix 2: PPMI Clinical Submission Form (Example)

A Konica Minolta Company

SPECT Submission Form

Clinical Site ID:

Subject Number (Participant ID): (4-digit 1.0 transition subjects)
 (5-digit 1.0 transition subjects)
 (6-digit 2.0 new subjects)

Scan Acquisition Date (DD-MMM-YYYY): - -

Modality: ☐ SPECT

Note: If CT for Attenuation correction or anatomical location were acquired as part of the SPECT scan, please submit to Invicro with the SPECT data.

Cohort: ☐ Healthy
☐ PD
☐ Prodromal

Radiopharmaceutical: ☐ ¹²³I-DaTscan
☐ ^{99m}Tc-TRODAT-1

SPECT Imaging Timepoint: ☐ Screening (6-digit 2.0 new subjects Only)
☐ Previously Acquired / Screening (6-digit 2.0 new subjects Only)
☐ Month 12/V04
☐ Month 24/V06
☐ Month 48/V10
☐ Other SPECT Timepoint

(If other is selected) Other SPECT Imaging Timepoint: ☐ Month 6/V02
☐ Month 18/V05
☐ Month 36/V08
☐ Month 60/V12
☐ Month 72/V13
☐ Month 84/V14
☐ Month 96/V15
☐ Month 108/V16
☐ Month 120/V17
☐ Month 132/V18
☐ Month 144/V19
☐ Month 156/V20

For previously acquired scans only: Please enter UNK for any information that is unknown at the time this form is completed.

Weight: ☐ lb ☐ kg
